

# CLASSIC NEXT GENERATION

A photograph of two hands, one on the left and one on the right, holding a blue butterfly. The butterfly is positioned in the center, between the two hands. The background is a light blue gradient with a faint circular pattern.

## IDEAL TACTILE PROPERTIES

The newly developed dipping process guarantees constant wall thickness from fingers to cuff. This results in ideal tactile sensitivity and less hand fatigue during even longer operations.

## HIGHER SAFETY

Sempermed's manufacturing process complies with all international quality standards and guarantees the required Acceptable Quality Level of 1.5. The new compounding of the Natural Rubber Latex and production technology result in a higher force at break and therefore in a higher safety.

## EXCELLENT GRIP AND COMFORT

Sensitivity, good control and a safe grip are essential for successful surgery. This glove has a micro-rough non-slip surface to enhance its ability to grip.

## SKIN CARE

The glove is lightly powdered with pure cornstarch which makes it easy to don. The multiple washing process (leaching) makes the natural latex glove skin friendly and very comfortable to wear.
